BasicLine2 – Functional design for best treatment conditions

Footrest optional

The upright sitting position for getting in and out is pre-programmed on the hand switch.

Footrest optional

With the help of the lever, the armrest can be adjusted to the desired position and inclination.

Footrest optional

Segments can be simultaneously adjusted for optimal individual relaxation.

Footrest optional

The large designed foot switch allows quick adjustment of the shock position from both sides.

The BasicLine2 was developed especially for the requirements in dialysis practices, oncological day clinics, infusion and transfusion medicine, and is also very suitable for use in general medical practices.

The innovative armrests give the chair its special look. They can be operated intuitively and allow a flexible adjustment for an ideal puncture as well as a comfortable sitting position for the patients or the blood donors / plasma donors.

BasicLine2 combines versatility with economy. Smooth-running castors, easy entry, continuously motorised movement to the desired position and the same high-quality materials as in all Bionic therapy chairs offer the best treatment conditions.

The armrests with overload protection and the base frame, which guarantees special stability, provide the necessary safety. A foot pedal on both sides of the underframe is used to activate the immediate shock position.

The optional, individually adjustable footrest offers even more comfort for your patients. As an alternative for mains connection, the BasicLine2 can also be operated with a powerful rechargeable battery and thus be placed anywhere.

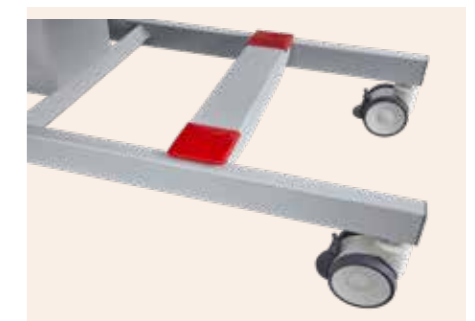

BasicLine2 is available in many colours and can be adapted to your interior. Please contact us for the extensive colour chart!

The comfortable fixed cushion provides good comfort during the treatment time.

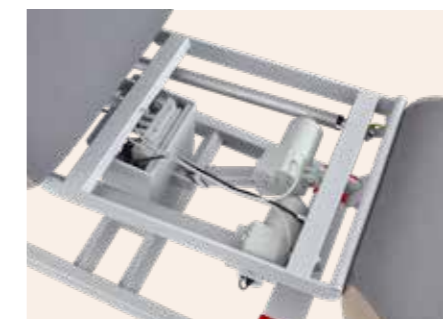

The illuminated hand switch is clear and simple. The segments can be simultaneously adjusted, the entry and exit position is programmed.

The large red foot switch allows the shock position to be set quickly, leaving both hands free to assist the patient.

The overload-protected armrest can be intuitively and easily swivelled to the side and lowered forwards using the lever for the optimum position.

The two motors are positioned directly under the removable seat part.

Equipotential bonding in accordance with EN 60601 increases safety for your patients.
